

**NAME**

drawMask\_pymca – drawMask\_pymca

**DESCRIPTION**

API 1 -> Console widget not available usage: drawMask\_pymca file1.edf file2.edf ...

Draw a mask, i.e. an image containing the list of pixels which are considered invalid (no scintillator, module gap, beam stop shadow, ...). This will open a PyMca window and let you draw on the first image (provided) with different tools (brush, rectangle selection, ...). When you are finished, come back to the console and press enter.

**positional arguments:**

FILE     Files to be processed

**optional arguments:**

**-h, --help**

show this help message and exit

**-v, --version**

show program's version number and exit

The mask image is saved into file1-masked.edf. Optionally the script will print the number of pixel masked and the intensity masked (as well on other files provided in input)
